

EMEL SAVASERI

Senior Data Engineer & Technical Lead | Enterprise Data Platforms | Treasury, Risk & Regulatory Reporting | Financial Services

Zürich, Switzerland

Profil

Senior Data Engineer and Technical Lead with 20+ years of experience designing and owning end-to-end data pipelines, ensuring production stability, and delivering enterprise applications within UBS and Credit Suisse environments in Swiss financial services.

Geri kalan paragraflar (production/incident/PowerDesigner vurgular) aynı kalabil

My background combines deep hands-on expertise in Oracle PL/SQL, Advanced SQL, Data Warehousing, ETL/ELT, Informatica, Unix Shell scripting, Control-M, Hadoop, Hive, Impala, and Spark with extensive Swiss banking domain knowledge across Treasury & Liquidity Reporting, Risk Finance, Product Control, Asset Management, Wealth Management, and Regulatory Reporting.

Over 13+ years supporting Credit Suisse through Cognizant, I worked as a Technical Lead, Application Owner and IT Owner for business-critical banking platforms. My responsibilities covered end-to-end application lifecycle ownership, production stability, data quality, root-cause analysis, incident and problem management, release coordination, disaster recovery, SLA delivery, and operational resilience, working across business, engineering, infrastructure, upstream, and downstream teams.

I am strongest at the intersection of business, data and technology: translating complex financial, regulatory and operational requirements into reliable technical solutions while ensuring data integrity, auditability, business continuity and timely delivery in highly regulated environments.

I complement my extensive enterprise data and production engineering experience with recent certifications and continued development in Python, Microsoft Azure, Databricks, Delta Lake, PySpark, Lakehouse architectures and modern cloud data platforms.

Core strengths: Data Platforms & Engineering · Application Management · Enterprise Integration · Technical Leadership · Oracle PL/SQL · Advanced SQL · ETL/ELT · Data Warehousing · Production Engineering · Application Lifecycle Ownership · Incident & Problem Management · Root Cause Analysis · Release Management · Regulatory Reporting · Operational Resilience · Informatica · Control-M · Hadoop · Hive · Impala · Spark

■ Zürich Area, Switzerland

Open to senior opportunities in: Technical Lead · Senior Data Engineering · Data Platforms · Application Management · Enterprise Integration · Technical/Application Architecture within Swiss financial services and other complex enterprise environments.

Skills

- Technology Risk

- Regulatory Reporting
- Banking Systems
- Operational Risk
- Data Governance
- German
- Oracle Database
- Oracle
- PL/SQL
- Microsoft Azure
- SQL
- Python (Programming Language)
- VBScript
- Unix
- Informatica
- Java
- Quality Center
- Databases
- Sybase
- HP Quality center
- Azure Databricks
- Hadoop
- Teamwork
- Technical Solution Design
- Delivery Coordination
- Technical Architecture
- Problem Management
- Continuous Improvement
- DevOps
- Continuous Integration and Continuous Delivery (CI/CD)
- Extract, Transform, Load (ETL)
- DWH
- Data Engineering
- Control-M
- Software Development Life Cycle (SDLC)

- Shell Scripting
- Requirements Gathering
- Troubleshooting
- Agile Project Management

Beruflicher Werdegang

Technical Lead assigned to Credit Suisse AG -Treasury & Liquidity Reporting · Cognizant · Zurich, Switzerland · 6 yrs 5 mos Technical Lead with end-to-end ownership of business-critical Finance data platforms supporting Treasury & Liquidity regulatory reporting across Oracle Data Warehouse, Hadoop, Hive, Spark and Impala environments. Managed the full application lifecycle across production operations, releases, maintenance, technical improvements, disaster recovery and operational resilience, ensuring stable and timely regulatory reporting under strict SLA, auditability, data integrity and business continuity requirements. Served as the senior technical escalation point for complex production incidents, integration and data quality issues, and reconciliation breaks across upstream, transformation, and downstream data flows. Led hands-on troubleshooting and root cause analysis, coordinating permanent engineering fixes across development, infrastructure, data provider, and business teams. • Reduced recurring production incidents by ~30% through root-cause elimination, automation, proactive monitoring, and permanent corrective actions. • Improved batch-processing efficiency by ~20% through workflow optimization, automated health checks and enhanced alerting. • Ensured accurate, high-volume regulatory data delivery supporting FINMA, PRA, FED and US GAAP reporting. • Applied risk-based judgement and directed go/no-go decisions where data completeness or correctness could not be validated. • Led cross-functional incident coordination, communicating impact, mitigation and resolution to business users, senior management and technology stakeholders. • Maintained technical specifications, integration documentation, runbooks, support procedures and knowledge-base materials within strict banking security, audit and data-protection frameworks.

Technical Lead assigned to Credit Suisse AG – Risk Finance & Product Control · Cognizant · Zurich, Switzerland · 7 yrs 4 mos Played a key role in the delivery and stability of Risk Finance and Product Control systems supporting daily and monthly P&L (Profit & Loss) reporting, reconciliations, and downstream financial controls. • Delivered more than 10 financial product integrations annually across the full application lifecycle, including requirements analysis, technical design, ETL development, testing, UAT, release, and L3 production support. • Managed monthly releases, application environments, performance tuning, data cleansing, and ongoing stability improvements. • Acted as the primary technical interface between Product Control stakeholders, upstream source-system owners, and downstream application teams, translating business and data requirements into ETL logic, technical specifications, source to target mappings, and reliable delivery solutions. • Ensured accurate front to back data flows from front and back-office systems into Product Control applications, supporting daily and monthly P&L reporting, reconciliations, and financial control processes. • Governed code quality, technical design consistency, test readiness, business sign-off, and production release quality across onshore and offshore delivery teams. • Consistently met multiple intraday SLA cut offs for business-critical Risk Finance and Product Control reporting over a seven-year period. • Coordinated a distributed Agile engineering team of 5–10 professionals across Zürich, Poland, and India, overseeing sprint delivery, technical quality, release planning, and production implementation. • Provided senior L3 production support, resolving complex incidents and ensuring continuity of critical Risk Finance and Product Control processes

Senior Software Architect | Developer · Credit Suisse · Zurich, Switzerland · 2 yrs 2 mos • Designed, architected, and implemented Oracle Data Warehouse solutions supporting Asset Management and Market Risk in a regulated banking environment. • Built and supported

batch-based data delivery pipelines providing validated outputs to downstream reporting and application teams under strict SLA constraints. • Worked directly with upstream providers, downstream consumers, and business stakeholders to clarify data requirements, define mappings, analyze transformation logic, and resolve delivery defects. • Integrated and enriched data from multiple internal and external sources, including Bloomberg, FactSet, VDPS, and CS Host, ensuring consistent delivery to downstream systems such as Wilshire, Charles River, and Spear. • Translated business requirements into scalable data models and technical solutions covering assets, benchmarks, and derivatives, including FX forwards, futures, swaps, and structured products. • Optimized complex Oracle PL/SQL packages, triggers, queries, and batch workflows for large-scale data processing and time sensitive reporting. • Supported release delivery, system integration, reverse engineering, and migration activities, including the migration from Visual SourceSafe to SVN.

Oracle Application Engineer · UBS · Zurich, Switzerland · 3 yrs 9 mos • Developed and supported I-SAC, UBS's ITIL-integrated CMDB and inventory data mart, integrating software, hardware, organizational, and service information from multiple providers, enriching the source data and delivering consolidated inventory information to downstream users and applications. • Designed and developed Oracle-based banking applications for Wealth Management and corporate systems, supporting portfolio, configuration, and metadata-driven data platforms. • Developed and optimized PL/SQL solutions, ETL pipelines, SQL*Loader processes, Unix Shell scripts, data interfaces, batch workflows, and database jobs. • Gathered business requirements and translated them into technical specifications, scalable database solutions, and reliable data processing workflows. • Contributed to data modelling, ERD design, normalization, indexing, reverse engineering, and data historicization initiatives using Power Designer. • Provided L3 production support, performance tuning, bug fixing, environment setup, and troubleshooting after production refresh cycles.

Software Engineer · Koster Engineering assigned to UBS AG · 1 yr 10 mos • Maintained, enhanced, and supported UBS reporting and portfolio management applications, including bug fixing, unit testing, and development of new Oracle PL/SQL solutions based on business requirements. • Improved application performance through SQL/PL/SQL tuning and migrated legacy Access/VBA and Sybase Transact-SQL programs to Oracle PL/SQL procedures, functions, triggers, and packages.

IT Consultant- Oracle App. Engineer for UBS · Koster Engineering & Services · Zurich, Switzerland · 1 yr 8 mos

Oracle Developer – IT Consultant for Swisslife · Deloitte · Zurich, Switzerland · 8 mos • Implemented business driven changes to insurance applications using Oracle PL/SQL and Oracle Forms, supporting integration and testing across core insurance entities.

Software Engineer · Ihlas Finance Bank · 2 yrs 7 mos • Developed and maintained credit-card applications, reports, PL/SQL modules, packages and procedures based on evolving business requirements. • Developed an online fraud-detection query module to identify suspicious and problematic customer activity. • Managed the Y2K compliance project, coordinating software and hardware reviews, project planning, documentation and communication with TÜV Germany.

Ausbildung

Boğaziçi University · Bachelor of Science · Computer Engineering
